

Module 5, Task 2 — Pr

Document	Principle / Provision	Direct quote
NIST AI RMF	GOVERN 1.1 — Legal requirements	“Legal and regulatory requirements involving AI are understood, managed, and documented.”
NIST AI RMF	GOVERN 2.1 — Clear responsibility	“Roles and responsibilities and lines of communication related to mapping, measuring, and managing AI risks are documented and are clear.”
NIST AI RMF	MAP 1.1 — Intended use and context	“Intended purposes, potentially beneficial uses, context-specific laws, norms and expectations, and prospective settings...are understood and documented.”
UNESCO	Right to privacy and data protection	“Privacy...must be respected, protected and promoted throughout the life cycle of AI systems.”
UNESCO	Transparency and explainability	“AI actors should inform users when a product or service is provided directly or with the assistance of AI systems.”

UNESCO	Multi-stakeholder governance	“Participation of different stakeholders throughout the AI system life cycle is necessary for inclusive approaches to AI governance.”
--------	------------------------------	---

Principle Application Table	
Institutional scenario	Operational implication for my role
CTIPH is drafting guidance for using AI in IPE design, communication, evaluation, and scholarship.	I would list the UArizona rules that apply before approving any use.
The Virtual Outpatient Clinic involves developers, faculty, evaluators, students, and compliance offices.	I would create a simple chart showing who approves, monitors, and responds to concerns.
The Virtual Outpatient Clinic is used for practicing therapeutic communication; not diagnosing or treating patients.	I would clearly state the intended use, limits, and prohibited uses.
AI may be used to summarize open-ended IPE survey comments.	I would remove identifiers and use only an approved, secure AI tool.
Students receive AI-generated feedback after completing a virtual-patient activity.	Students are informed when/how AI is used for the Virtual Outpatient Clinic, which draws evaluation from validated tools.

CTIPH's AI guidance could affect students, faculty, staff, technology partners, and participating programs.	I would ask representatives from each group to review the guidance before it is finalized.
---	--

Which Framework Is More Actional

NIST is more useful right away because it gives me a clear process for responsibility, and setting rules. UNESCO adds important reminders at including the people affected by AI decisions. I would use NIST to orga to make sure it stays people-centered.

ole?

identifying risks, assigning
out privacy, transparency, and
nize the guideline and UNESCO
