

Workflow Audit Matrix:

Task name	Frequency	Time/ Instance
Draft/edit student or faculty communications	Daily	30-90
Drop students from events/roster/D2L	Daily	30-60
Create IPE learner worksheets or facilitator guides	Monthly	days
Create evenly distributed interprofessional teams (6) from list of 300+	2X month, prior to events	Hours
Summarize aggregate post-event feedback	Monthly/after events	Hours

Creating IPE Learner Worksheets is a strong AI integration candidate because it has high AI potential and low data sensitivity, while still requiring my professional judgment for final alignment with IPEC competencies, learning objectives, and facilitator needs. This fits Dell'Acqua et al.'s centaur model: AI can help draft, organize, and revise worksheet or guide content, while you remain responsible for the instructional reasoning, accuracy, and contextual fit. It also sits mostly inside the jagged frontier, because AI is helpful for generating structured educational materials, but it still needs human review to avoid generic, inaccurate, or misaligned content.

Cognitive demand (1–5)	AI integration potential (1–5)	Data sensitivity (1–5)
2 to 4 depends on email	5	2
1	1	5
4 to 5	5	1
5	5	5
5	5	1
