

Mod 3, Task 3: Academic Integrity Scenario Analysis

Scenario	Appropriate?	Disclose? Y/N	To whom
1	Depends	Yes	Students; chair only if tool/data use was not already approved.
2	Depends	Yes	Department chair/communications owner; recipients if department practice requires it.
3	Depends	Yes	Tenure committee and department chair; document in the file if local P&T process allows.
4	No	Yes	Supervisor, Disability Services leadership, Information Security/Privacy/Registrar as appropriate; students if directed.

1-sentence reasoning	Policy clarity
AI-assisted feedback is defensible only with de-identified/approved data and instructor accountability; because the guide recommends disclosure and PII minimization for student-related scenarios, students should know AI helped draft the feedback.	Partially addressed
Using public information is low-risk, but because the newsletter speaks with an official department voice, the guide supports internal disclosure/approval when unsure and good-practice disclosure of AI-assisted content.	Mostly silent
AI drafting is not clearly prohibited, but a high-stakes reference letter relies on personal professional judgment and integrity, so undisclosed substantive AI assistance should be cleared or disclosed.	Mostly silent
Student names plus disability accommodations are FERPA/restricted data, and an unapproved or free AI tool is not allowed for FERPA/PII use, so speed and accuracy do not justify the data handling.	Not silent

Gap / ambiguity
Teaching guidance mentions AI-assisted response to student work and disclosure, but does not specify exact wording or threshold for disclosing AI-drafted personalized feedback.
Institutional communications using public data are not directly addressed; the policy does not clarify when official department voice requires recipient-facing disclosure versus internal approval only.
AI guidance gives general disclosure and integrity principles, but does not directly address P&T/reference letters or when AI drafting changes the meaning of personal authorship.
The data-use guide directly addresses FERPA/PII and tool approval; the main gap is operational training and an escalation path for backlog/efficiency pressures.
